【Abstract】Objective To observe the effects of traditional Chinese medicine (TCM) syndrome differentiation quadruple therapy on serum thromboxane A₂ (TXA₂), prostacyclin (PGI₂) and platelet activating factor (PAF) levels in patients with acute pancreatitis (AP). **Methods** Ninety patients with AP admitted to the First Affiliated Hospital of Henan University of TCM from January 2016 to March 2017, and they were divided into an observation group and a control group according to the random numbers generated by computer inpatients, 45 cases in each group. The control group was given routine treatment of western medicine, and the observation group was given TCM syndrome differentiation quadruple therapy according to the patient's disease individual situation and on the basis of western medicine treatment. The TCM syndrome differentiation quadruple therapy included the following methods: intragastric administration of TCM decoction [gastrointestinal excess heat syndrome (rhubarb, sodium sulfate, aurantii fructus immaturus, magnolia bark, etc.), damp heat syndrome of liver and gallbladder (radix bupleuri, aurantii fructus immaturus, baical skullcap root, rhubarb, etc.), each group of above agents immersed in water and decocted to make juice 400 mL, once 100 mL taken orally, every 4 hours]; retention enema with TCM decoction [rhubarb, magnolia bark, aurantii fructus immaturus, sodium sulfate (dissolved) etc, each dose of agents forming decoction 400 mL, 200 mL taken for proctoclysis, once every 6 hours]; Chinese medicine package (boswellin, myrrha, dandelion, coptidis rhizoma and so on crushed and

mixed with honey, then applied to the body surface of the pancreas and its periphery, 1 dose each time for 4 hours, once a day); intravenous drip of blood-activating and stasis-resolving TCM (Dengzhanhuasu injection 100 mg added to 5% glucose solution 250 mL for intravenous drip). The times of disappearance of abdominal distension, abdominal pain, and the recovery times of bowel sound, blood amylase, lipase, C-reactive protein (CRP), white blood cell count (WBC) levels to normal were compared between the two groups; the modified CT severity index (MCTSI) score and the changes of serum TXA₂, PAF and PGI₂ levels were observed before and after treatment in the two groups. **Results** The abdominal pain and abdominal distension disappearance times in observation group were shorter than those in control group [abdominal pain (days): 5.07±1.88 vs. 6.02±1.89, abdominal distension (days): 3.50±1.49 vs. 4.40±1.53, both $P < 0.05$]; the recovery times of bowel sounds, WBC, CRP, amylase and lipase to normal were shorter than those of the control group [bowel sounds (days): 4.05±1.79 vs. 5.00±1.55, WBC (days): 3.93±1.49 vs. 5.98±2.90, CRP (days): 6.17±2.46 vs. 7.92±2.84, blood amylase (days): 3.5 (3.0, 5.0) vs. 5.0 (3.0, 5.5), lipase (days): 5.0 (3.0, 7.0) vs. 6.5 (5.0, 9.0), all $P < 0.05$]; the scores of MCTSI in the two groups were lower than those before treatment and the degree of decrease in the observation group was more significant than that in the control group [2 (0, 4) vs. 4 (0, 6), $P < 0.05$]. The TXA₂ and PAF levels of the two groups were significantly lower than those before treatment and the level of PGI₂ was significantly higher than that before treatment; after treatment for 3 days, the differences between the two groups showed statistical significance and on the 7th day after treatment, the degrees of improvement in observation group were more obvious than those of the control group [TXA₂ (ng/L): 276.81±31.48 vs. 345.42±47.27, PAF (ng/L): 72.65±17.61 vs. 89.77±15.59, PGI₂ (ng/L): 104.43±18.67 vs. 94.37±17.91, all $P < 0.05$]; on the 14th day after treatment, the values of the two groups were very close and there were no statistically significant differences (all $P > 0.05$). **Conclusions** The TCM differentiation syndrome quadruple therapy for treatment of AP is beneficial to the disappearance of clinical symptoms of patients with different syndromes, recovery of abnormal signs and improvement of laboratory indexes, and its early use can significantly reduce the serum levels of TXA₂, PAF and increase the level of PGI₂ in patients with AP.

3 讨 论

根据 AP 的临床表现,中医学多将其归属于“脾心痛”“胃脘痛”“胃心痛”“腹痛”等范畴,认为 AP 的发病多因酒食不节、嗜食肥甘厚腻之品,长期情志不疏,虫积内伤,感受外邪等,湿、热、瘀、毒蕴结于中焦,导致中焦气机不畅,肝胆疏泄不利,气机阻滞,影响血液运行瘀而化热,瘀热互结而引起,病理性质以里、实、热证为主,病位在脾、胃、肝、胆^[4]。AP 的基本病机是“腑气不通”,并有滞、热、瘀 3 个关键环节,六腑应实而不满,气机调畅,“不通则痛”,故治疗上强调通里攻下、行气破滞、活血化瘀^[5]。中医药多途径、多靶点干预 SAP 发病机制疗效显著^[6]。本课题组前期采用中医药四联疗法治疗 AP 取得了较满意的效果^[7-8]。

AP 的危害在于多种并发症的发生,其早期常出现麻痹性肠梗阻是其发生的根源。胃肠道是人体最大的细菌库,AP 时由于胃肠道不同程度损伤,可致一系列并发症的发生,故在治疗过程中应注意防止并发症的发生^[9]。研究发现,长期肠外营养(PN)支持可导致肠功能衰竭,早期给予肠内营养(EN)支持及微生态制剂有利于保护肠道屏障的完整性,减少 SAP 患者并发症的发生^[10]。EN 对控制 SAP 患者肠源性感染、缩短肠源性感染病程^[11]、降低感染发生率、提高患者免疫功能、降低腹内高压的发生有重要作用^[12-13]。研究表明,早期低脂 EN 能有效降低 SAP 患者三酰甘油水平,减轻胰腺炎症反应^[14]。清胰汤结合西医综合治疗对控制 AP 急性期全身炎症反应综合征(SIRS)疗效良好^[15]。本研究在治疗初期即采用中药灌胃、灌肠,一方面能促使肠道蓄积毒素排出体外,避免肠道细菌移位继发感染,同时有利于早期进食,防止肠功能衰竭的发生。

AP 发病机制复杂,并且由于胰腺坏死及坏死后感染等最终会导致 SAP^[16-17]。AP 时,血管内皮细胞损伤、纤溶系统激活,可导致凝血功能障碍,凝血功能障碍越明显,病情越重^[18]。胰腺微循环障碍作

为 AP 的主要病理改变,存在于 AP 的早期,被认为是 SAP 的启动因子,并成为一种持续性损害机制贯穿于 SAP 演变的整个病理生理过程中^[19]。SAP 早期即发生血液循环障碍,这不仅存在于缺血坏死的胰腺局部,同时也存在于外周循环及缺血与功能失常的其他器官^[20]。AP 时血管活性物质大量释放及失衡在胰腺微循环障碍中有重要意义^[21]。PGI₂ 和 TXA₂ 均属于前列腺素类因子,是由血管内皮细胞分泌的两种互相拮抗的血管活性物质,是体内一对主要的维持血管舒张和收缩平衡的活性分子。TXA₂ 是血小板聚集促进剂,具有强烈的缩血管作用,其大量释放可引起血小板大量聚集,微血管收缩导致血栓形成,血液呈高凝状态,导致 AP 微循环障碍;而 PGI₂ 具有较强的舒张血管作用,可拮抗 TXA₂ 的缩血管作用,同时可抑制血小板聚集,阻止血栓形成,二者在调节微循环中具有重要作用^[22-23]。AP 患者 TXA₂ 产生增加,导致凝血功能障碍,而机体血小板大量聚集形成脂质过氧化物,抑制了 PGI₂ 的合成而浓度下降,使 PGI₂/TXA₂ 比例失衡,导致微血栓形成,引起胰腺缺血、微循环障碍,加重了胰腺损伤^[24-25]。PAF 是目前发现的一种有较强内源性生物活性的物质,可参与内源性炎症启动和放大的过程,激活血小板,导致大量血小板聚集形成血栓;同时 PAF 大量释放可增加毛细血管的通透性,导致血浆胶体外渗、全血黏度增加,引起微循环障碍^[26]。白延霖^[27]认为,血清 PAF 含量可很好地反映 AP 早期的病情严重程度。陈铭等^[28]对 97 例 AP 患者的凝血功能分析发现,AP 时炎症反应的程度与凝血功能、微循环障碍有密切关系。

微循环障碍贯穿于 AP 的整个病程中,活血化瘀法亦应贯穿于 AP 治疗的始终。因“瘀血化火宜通下”,故在治疗 AP 时多选用通腑泻下、清热解毒、活血化瘀等药物改善 AP 患者的微循环障碍^[29-30]。

本研究表明,早期辨证应用中医药四联疗法有利于患者腹胀、腹痛等症状的缓解和消失,缩短生化指标恢复正常时间;两组治疗后血清 TXA₂、PAF 水平呈下降趋势,PGI₂ 呈上升趋势;观察组治疗 3 d TXA₂、PAF 出现明显下降,PGI₂ 明显上升,治疗 7 d 趋于稳定;对照组治疗 7 d TXA₂、PAF 出现明显下降,PGI₂ 明显上升,治疗 14 d 趋于稳定,观察组治疗 3 d、7 d 的改善程度较对照组更加明显。说明中医辨证四联疗法可以在早期促进 TXA₂/PAF 恢复平

衡,降低PAF水平,防止血小板大量聚集,避免微血栓形成,改善AP微循环障碍,阻断病情进展,阻止MAP向SAP发展,减少并发症,缩短病程。

综上所述,AP病机复杂,病情危重,临幊上应充分发挥中医药的作用,治疗上应切中病机、辨证论治。在AP早期辨证运用中医四联疗法,上下共进、内外同治,多途径、多靶点综合治疗,充分发挥通腑泄热、化瘀解毒之力,尽快改善微循环障碍,消除肠道梗阻不畅,使腑气调畅,气血运行复常,疾病治愈。
